

# DRUG FACILITATED SEXUAL ASSAULT COURSE

I have been a sexual assault investigator for years. I've had many sexual assaults that I thought were drug related, but I had no idea how to proceed with them. This course gave me a complete understanding of drugs and how they are used in a rape. Not just involuntary stranger rapes, but rapes where both the victim and the suspect were both taking drugs voluntarily. This should be a mandatory course for every sexual assault investigator. Detective "G", Northern California

## Learn how to respond to cases where the victim says they have been drugged and raped

- Identify the drug most commonly used to facilitate sexual assault
- Recognize that the effects of alcohol can be similar to the new drugs being used to facilitate sexual assault
- Identify the challenges in preliminary investigations
- Identify the most recent drugs being used to facilitate sexual assault and how to identify them
- Recognize the indicators of drug facilitated sexual assault
- Understand the scope of the evidence collection process and current limitations of toxicology testing
- Identify evidence that should be collected in a drug facilitated sexual assault
- Best practices for investigating DFSA cases

**Taught by experience Drug Recognition Experts and Sexual Assault Investigators**
